Mystic Rose (18 Point)

How many lines?

Sum (1 to 17)

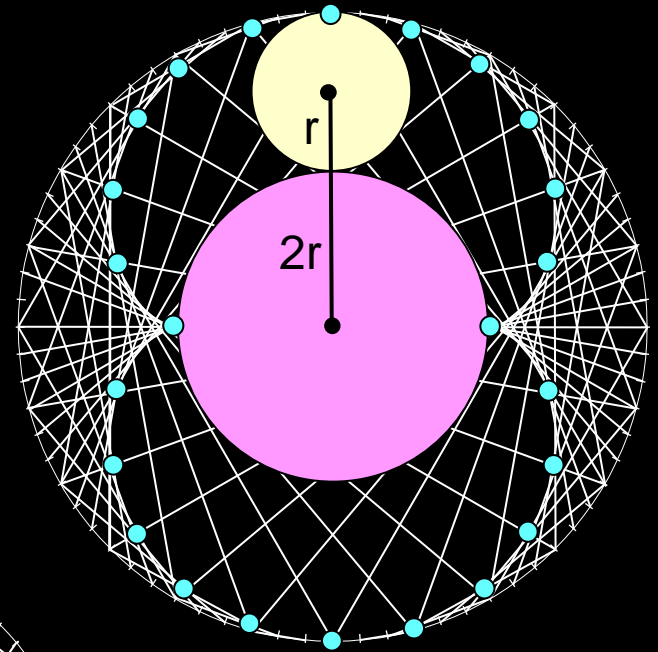

$$(17 \times 18) / 2 = 153$$

The **Epicycloids** is the name given to the family of curves that are traced out by the path of a point on the circumference of a circle, that rolls around the outside of a fixed circle of **different radii**.

Cardioid(Single Cusp)
(Heart Shaped)

Nephroid (Double Cusp)
(Kidney Shaped)

Epicycloid of Cremona
named after the
mathematician

A **Cardioid** is the name given to the curve that is traced out by the path of a point on the circumference of a circle that rolls around the outside of a fixed circle of **equal** radius.

Cardioid

A **Nephroid** is the name given to the curve that is traced out by the path of a point on the circumference of a circle that rolls around the outside of a fixed circle of **twice** its radius.

Nephroid

The **Epicycloid of Cremona** is the name given to the curve that is traced out by the path of a point on the circumference of a circle that rolls around the outside of a fixed circle of **3 times** its radius.
